SUMMARY

Apple-platform engineer with 10+ years building production iOS and tvOS applications across streaming, fintech, transit and healthcare. Introduced automated testing and owned accessibility from inception on platforms serving millions of users. In 2026 I designed, built and shipped MoMudra — an on-device-AI personal finance app — solo, from SwiftUI client through serverless backend to App Store release.

EXPERIENCE

Founder & iOS Engineer · MoMudra (independent)

2025 – Present

AI money tracker · iOS 18+ · Live on the App Store, July 2026 · Sole engineer

- **Shipped solo end to end** — client, backend, App Store release and subscription billing, with no team and no external funding.
- **Built a universal capture engine** accepting typed, spoken and photographed receipt input, with confidence-scored parsing normalising all three into a single transaction model.
- **Wrote transaction categorisation to run entirely on device** in pure Swift — no model download, no server round trip, and financial data that never leaves the phone. Privacy as an architectural constraint rather than a policy statement.
- **Designed multi-tier LLM provider routing** with automatic fallback, keeping AI features responsive when an upstream provider degrades or rate-limits.
- **Added Siri App Intents** for voice-driven expense logging without opening the app.
- **Built and operate the serverless API layer** on Cloudflare Workers, keeping the backend surface deliberately thin so the device stays the source of truth.
- **Monetisation via StoreKit 2** — free tier plus monthly and annual subscription tiers.

Stack: Swift 6, SwiftUI, SwiftData, Swift Concurrency (async/await, actors), Clean Architecture with environment-based DI, StoreKit 2, Core ML, App Intents, Cloudflare Workers.

Senior iOS Engineer · Robosoft Technologies

Jan 2021 – Present

Apple-platform feature development across streaming, transit and enterprise clients

- **Introduced snapshot and UI testing** to teams that had neither, and drove production code coverage above 90%, wired into CI through GitHub Actions and SonarCloud.
- **Owned accessibility implementation** across the platform from inception — VoiceOver, Dynamic Type and focus management designed in rather than retrofitted ahead of an audit.
- **Led UIFocusEnvironment work for tvOS**, including custom focus behaviour beyond what the framework provides by default.
- **Built major features on Fuse**, a shared codebase powering 18 live streaming apps — including TLC GO and Discovery+ — across iOS, tvOS and visionOS, using a CommandBuilder / Interactor / Router architecture with protocol-oriented dependency injection.
- **Delivered features and maintenance on First Bus**, live transit tracking and mobile ticketing for a UK operator, rated 4.6★ across 197k App Store ratings, with 80%+ test coverage.
- **Built a centralised design-token system** (typography, spacing, colour) sourced from Figma, so design updates propagate without hand-editing individual screens.

Stack: Swift, SwiftUI, UIKit, Swift Concurrency, tvOS, visionOS, AVKit, SSO, MUX, Braze, Branch.io, New Relic, GitHub Actions, SonarCloud, Fastlane.

iOS Developer · Bajaj Markets

May 2019 – Nov 2020

Bajaj Finserv Markets — loans, credit cards, insurance, investments and EMI shopping

- **Delivered features** across a multi-product financial marketplace where a display defect becomes a support ticket and a rounding defect becomes a refund.
- **Implemented single sign-on across web and app** using the shared Safari session, so a user already authenticated on the web property arrived inside the app already logged in.
- **Implemented real-time data flows**, authentication and RESTful service integration.
- **Built deep linking** across campaign and partner entry points into the app.

Stack: Objective-C, Swift, MVVM, web/app SSO, deep linking, Bitbucket, Jira.

iOS & tvOS Developer · Muvi Entertainment

Mar 2018 – Apr 2019

Live and on-demand streaming platform used by other developers to build their own products

- **Built streaming applications** for iOS and tvOS on a white-label platform, designing for extension rather than for a single product.
- **Implemented universal linking**, authentication flows and crash monitoring.

Stack: Swift, Alamofire, Crashlytics, MVVM, unit testing.

iOS Developer · Mobiona Software Solutions

Mar 2016 – Feb 2018

Services consultancy — began my iOS career during the Objective-C to Swift transition

- **Built applications from scratch** across healthcare and consumer, including Medtronic CareLink Mobile, a companion app for implantable cardiac devices.
- **Worked across the UIKit stack** — Core Data, Realm, Firebase, Auto Layout and JSON/XML parsing.
Stack: Objective-C, Swift, UIKit, Core Data, Realm, Firebase, Alamofire, Appium.

TECHNICAL SKILLS

Languages Swift 6 (strict concurrency, async/await, actors, Combine), Objective-C

Apple Platforms iOS 18+, tvOS, visionOS · SwiftUI, UIKit, SwiftData, Core Data, AVKit, StoreKit 2, App Intents, WidgetKit

Architecture Clean Architecture, MVVM, SOLID, protocol-oriented design, dependency injection, modular feature organisation, design systems and tokens

Testing & Quality XCTest, Swift Testing, snapshot testing, UI testing, SwiftLint, Periphery, SonarCloud, Xcode Instruments, Memory Graph Debugger

Accessibility VoiceOver, Dynamic Type, focus management, WCAG-aligned auditing

CI/CD & Tooling GitHub Actions, Fastlane, CircleCI, Git, Charles/Proxyman, Figma, App Store Connect

AI & On-Device ML Core ML, NaturalLanguage, FoundationModels, on-device classification, OCR, Claude/OpenAI/Groq APIs

Backend & Cloud Cloudflare Workers (serverless APIs), REST, web/app single sign-on

SELECTED SHIPPED APPLICATIONS

- **MoMudra** — AI money tracker, built and published solo (2026)
- **Fuse** — 18 streaming apps including TLC GO and Discovery+, iOS / tvOS / visionOS
- **First Bus** — UK transit tracking and ticketing, 4.6★ across 197k ratings
- **Bajaj Finserv Markets** — fintech marketplace
- **Medtronic CareLink Mobile** — cardiac device companion app
- **Muvi, TikMe** — streaming platform and restaurant ordering (US & Canada)

EDUCATION

B.Tech, Computer Science Engineering · Institute of Technical Education & Research, Bhubaneswar

2010 – 2014

Languages Odia (native), Hindi, English

INTERESTS

Manga and manhwa · RPG and multiplayer online games · Chess · Swift language deep-dives
